Testimony of the Interstate Environmental Commission Before the New York State Joint Legislative Hearing on 2018-2019 Executive Budget Proposal

Environmental Conservation

February 7, 2018

Thank You Senator Young, Assemblywoman Weinstein, Senator O'Mara, Assemblyman Englebright, members of the legislative fiscal and Environmental Conservation Committees. Thank you for this opportunity to offer testimony on behalf of the Interstate Environmental Commission in regards to the Governor's proposed budget for State Fiscal Year 2018-2019.

The Interstate Environmental Commission commends Governor Cuomo for continuing to demonstrate, through the Executive Budget, his commitment to protecting New York's environment. In particular, the continued, full funding of the Environmental Protection Fund is vital for the protection New York's natural resources. The funding appropriated through these budget actions demonstrates New York's understanding of the need to invest resources in order to protect and restore New York's environment. It is especially reassuring, during this time of uncertainty regarding federal funding for the environment, to know that New York remains committed to investing resources in environmental protection.

The Interstate Environmental Commission (or IEC) is a tri-state water and air pollution control agency committed to protecting, conserving, and restoring New York's environment, particularly in the area of water quality.

In brief, the Interstate Environmental Commission's District runs west from a line between Port Jefferson, New York, and New Haven, Connecticut, on Long Island Sound; south from Bear Mountain on the Hudson River to Sandy Hook, New Jersey (including Upper and Lower New York Bays, Newark Bay, Arthur Kill and Kill Van Kull); and embraces a portion of the Atlantic Ocean out to Fire Island Inlet on the southern shore of Long Island and the waters abutting all five boroughs of New York City. Our entire district is either New York water, or water that is shared by New York and its neighboring states of New Jersey and Connecticut. Just as water knows no state borders, the IEC is committed to taking a regional approach to water quality management, yet recognizes that water quality protection needs vary across our member

states and in fact across different regions within the state.

The IEC's mission is to protect and enhance environmental quality in the Interstate Environmental District through monitoring, cooperation, regulation, coordination and mutual dialogue between government agencies and citizens. The IEC fulfills this mission through a number of strategies developed to meet regional water quality needs:

The IEC strategically fills geographical, temporal, or analytical gaps in regional monitoring programs in coordination with the states, EPA, and regional partners:

- In response to the increasingly critical need to document summer hypoxic conditions in western Long Island Sound and its embayments, IEC has monitored dissolved oxygen, as well as key water quality parameters relevant to hypoxia, in far western Long Island Sound every summer since 1991.
- In 2015, in conjunction with NYSDEC, IEC began a pilot program expanding the sampling scope at one of its western Long Island Sound stations to incorporate it into NYSDEC's routine network of monitoring stations associated with its Rotating Integrated Basin Studies (RIBS). The incorporation of this station will expand NYSDEC's routine monitoring network, to include the only station south of Poughkeepsie in NYSDEC's routine monitoring network.

In addition, IEC has the capability to perform short-notice inspections—sampling, monitoring, and analyses—in response to regional environmental emergencies, concerns, or natural disasters. In the past, IEC has assisted local environmental agencies to determine environmental impacts after natural or manmade events. In 2017, IEC partnered with EPA, USGS, and NYC Parks on a short-notice project assessing water quality along the Harlem River in the vicinity of a proposed public access site.

- IEC's ability to mobilize quickly and perform sampling and associated analyses quickly at the request of local, state and federal agencies makes IEC a valuable resource.
- Since October 1994, the Commission's laboratory has been located on CUNY's College of Staten Island (CSI) campus in Staten Island, New York. Since 2000, the laboratory has held accreditation through the National Environmental Laboratory Approval Program (NELAP). The IEC laboratory holds primary NELAP accreditation through the New York State Department of Health's Environmental Laboratory Approval Program (ELAP). The Commission's laboratory is dedicated to producing technically defensible environmental data, through sound science and a comprehensive quality control and quality assurance (QA/QC) program.

The IEC performs coordinated, tailored inspections and projects designed to assist, rather than duplicate, compliance efforts of the New York State DEC:

- IEC has a robust, coordinated, and tailored inspection program which includes inspections at SPDES-permitted wastewater treatment plants (water resource recovery facilities), industrial dischargers, pump stations, combined sewer systems as well as municipal separate storm sewer (MS4) systems focusing on state priorities designed to complement efforts of regulatory authorities. IEC's staff conducts inspections with sampling at industrial facilities and municipal wastewater treatment plants year-round. These inspections, which are planned in coordination with regional NYSDEC staff, include effluent sampling and an inspection of processes, equipment, and plant records. Samples collected at these facilities are analyzed in the IEC's certified laboratory to determine compliance with the IEC's Water Quality Regulations and with each facility's specific SPDES permit. In New York State, IEC is frequently the only agency performing effluent compliance monitoring at SPDES permitted discharges. Thus, IEC's compliance monitoring is, in many cases, the only verification of data reported by permittees on discharge monitoring reports.

The IEC facilitates, coordinates, and supports new and existing citizen science monitoring efforts:

- In 2016, IEC partnered with NY-NJ HEP and EPA to promote citizen science through participation in HEP's citizen science grant program. In 2017, IEC expanded this effort, with the implementation of a coordinated volunteer water quality monitoring program in the shared marine waters of the Interstate Environmental District (IED). The effort recognizes state and EPA priorities, is modeled on existing state volunteer programs already in place, and emphasizes synergies, efficiencies, and the desire of the public for consistent efforts in these waters. The program targets areas, such as the near-shore areas of Staten Island, which are not routinely monitored by regulatory agencies or other established monitoring programs and focuses on parameters such as pathogens, which are of particular concern to the public as they relate to recreational water quality in near-shore marine waters. Again, having an ELAP and NELAP certified laboratory located in Staten Island, IEC is uniquely positioned to assist citizen scientists with the analyses and quality assurance oversight needed for their data to be used to inform monitoring and actions performed by local, state and federal agencies.

While the majority of the IEC's funding comes from other sources—primarily federal Clean Water Act Section 106 grants—state funding is critical to enable the Commission to implement the work plan of the grants and to meet the match requirement for federal grants. In federal fiscal year 2017, IEC was awarded \$739,000 in 106 funds. IEC also receives annual federal funding from EPA Region 1's Long Island Sound office to support its western Long Island Sound monitoring, and has recently submitted a grant proposal, jointly with the College of Staten

Island, in response to RFP sponsored by the National Fish and Wildlife Foundation to further expand its support and coordination of citizen science efforts.

In 2008, IEC had a staff of 19. Today, we have four full-time incredibly dedicated staff members. Despite the reductions in resources and staff, IEC has persevered. We tightened our belts, consolidated and focused available resources to accomplish what was most important—maintaining the ability to address the most pressing water quality needs in our District and of our member states.

New York had a long history of supporting the work of the IEC until 2009 when financial stresses caused the state to cut previous appropriations of over \$300,000 to the statutory minimum level of funding—\$15,000—as set forth in the *Tri-State Compact of 1936*. Going forward, IEC is requesting that the annual non-federal match of \$214,051 be provided by our three member states in accordance with the structure set forth in the *Tri-State Compact*—45% support from New York and New Jersey and 10% support from Connecticut. **Accordingly, we respectfully ask the Legislature to increase the appropriation in the New York State FY2018-2019 for the Interstate Environmental Commission to 45 percent of the required \$214,051 matching funds— \$96,323.** This level of funding is critical to ensure IEC's continued eligibility to apply for and receive federal funding of over \$700,000 annually, yielding New York State a significant return on its investment.

On behalf of the IEC, I would like to thank the Legislature and, in particular, the legislative committees on environmental conservation, for their continued leadership and diligent oversight of State environmental policy. The IEC genuinely appreciates this opportunity to testify at the budget hearing, is hopeful that the Legislature will consider our request, and looks forward to continuing our important water quality work in support of New York State.
