

NEW YORK STATE SENATOR

Brian X. Foley

Senator Foley Leads Charge for Groundbreaking Energy Efficient Building Standards

BRIAN X. FOLEY May 13, 2010

| ISSUE: **RENEWABLE ENERGY**

State Senator Brian X. Foley (D-Blue Point) was joined by environmental advocates to hail Senate Bill 6912-A being reported out of the Senate Energy and Telecommunications Committee, and to urge its swift passage by the full senate.

This legislation, sponsored by Senator Foley, would make New York State a leader in requiring new residential construction state-wide to meet strict energy efficiency standards.

The implementation of the standards would result in the creation of hundreds of new green collar jobs and increase work opportunities in implementing efficiency improvements for thousands of laborers in the building trades across the state.

“I am proud to be the lead sponsor of the New York State Energy Star legislation,” said Senator Foley. “This legislation will make New York a nationwide leader among states in residential energy conservation standards. More than that, it will help to put New Yorkers back to work at a time when job creation is critically needed.”

The legislation amends the State Energy Conservation Construction Code to create a higher standard for the energy efficiency of new homes. It has taken six years since the last updated standards were released by the American Society of Heating, Refrigeration and Air-Conditioning Engineers (ASHRAE) for the New York State Code to be updated. In that time period, new standards have already been released and reviewed extensively by ASHRAE. In the future, new codes would be required to be adopted within eighteen months.

Energy Star building standards for new residential construction have already been adopted in some areas of New York State; most notably, ten of Long Island’s thirteen towns have adopted some level of energy conservation standards. While Supervisor of Brookhaven Town, Senator Foley was the first town supervisor on Long Island, and perhaps in the state, to introduce Energy Star legislation.

“It is extremely gratifying to be able to continue state-wide a mission I began while at Brookhaven Town,” said Senator Foley. “The adoption of these standards by Brookhaven and the other nine towns was a major step in reducing Long Island’s emissions and environmental impact, but adopting it on a state-wide level is an even larger step towards reducing our energy consumption and beginning to incorporate energy efficiency and alternate energy sources into our everyday lives.”

“Building the economy of tomorrow requires our commitment to energy efficiency today,” said Senate Majority Conference Leader John L. Sampson. “By creating a statewide energy code for residential buildings we can cut energy costs, reduce carbon emissions and create new green jobs to fuel economic growth. I applaud Senator Foley for his innovative approach to improving our economy and protecting our environment.”

“We are very proud to have worked with Senator Foley to pioneer performance based home energy codes that are now working in ten of thirteen Long Island towns,” said Demosthenes Maratos, Program Director of the Long Island Neighborhood Network. “And we are pleased once again to stand with the Senator in support of this groundbreaking legislation. Once this law is in effect, buyers of new homes throughout New York State will be secure in knowing their homes have been performance tested to meet stringent energy efficiency standards – both saving them money and reducing their carbon footprint.”

“The Residential Energy Efficient Building Code will not only help clean New York’s air and reduce our dependence on foreign oil, it will help put New Yorkers back to work,” said Marcia Bystryn, President of the New York League of Conservation Voters. “We salute Senator Foley, Majority Leader Sampson and the members of the Energy and Telecommunications Committee for their leadership, and we urge the full Senate to approve this groundbreaking legislation as soon as possible.”

“Updating our residential energy efficiency codes has been delayed for far too long,” said Adrienne Esposito, Executive Director of Citizens’ Campaign for the Environment. “This legislation is an essential component to usher in an energy efficient future for New York. We congratulate Senator Foley for sponsoring and advancing this important bill, and now urge the full Senate to pass this legislation.”

“Updating the New York State Energy Conservation Code is long overdue and will provide an undeniable win-win scenario for the environment, for the consumer and for our energy infrastructure,” said Bob DeLuca, President of Group for the East End. “By increasing the required efficiency of every new home, New Yorkers will save millions in heating and cooling costs while taking tons of toxic and greenhouse gases out of the atmosphere and reducing the rising pressure on our aging electrical grid. Few legislative actions could have a more widespread and positive impact on residential conservation and related economic saving for homeowners.”

“Senator Foley has been a leader on Long Island in making Energy Star successful,” said Lisa Tyson, Director of the Long Island Progressive Coalition. “Now he is doing the right thing by bringing this important program statewide. This bill is a win-win. It will reduce carbon footprint while saving families money.”

“Energy efficiency improvements can significantly reduce a building’s energy consumption, save New York homeowners tens of thousands of dollars in energy costs, and reduce greenhouse gas emissions,” said Ross Gould, Air and Energy Program Director, Environmental Advocates of New York. “We strongly support updating these standards in the State Energy Law and passing this bill in a timely manner.”

“It is a little known fact that buildings are responsible for almost half of our country’s total energy consumption and greenhouse gas emissions,” said Gordian Raacke, Executive Director of Renewable Energy Long Island (reLI). “Once a home is built, its owners are often stuck with a substandard and energy-wasting building for decades because it is much more difficult and costly to fix later what should have been done right in the first place. That’s why Senator Foley’s legislation is so important.”

“Energy efficiency standards have put money into the wallets of families across Long Island for years, and now New Yorkers across the state can benefit from this common-sense approach,” said Jessica Helm, Conservation Chair for the Atlantic Chapter for the Atlantic Chapter of the Sierra Club. “By raising energy efficiency standards for all new residential construction, New York State can generate well-paying jobs, save rate-payers on utility costs, and slow the growth of our energy consumption.”

Senate Bill 6912-A was reported out of the Senate Energy and Technology Committee on April 27, 2010. Its companion bill in the Assembly, sponsored by Assemblyman Steve Englebright, has not yet been reported out of committee,

“I am confident that this bill will pass the senate with bi-partisan support,” said Senator Foley. “I urge the assembly to take action on its legislation so that we may more quickly realize the positive effects this legislation will provide.”
