Senator Mark Grisanti (R,I-Buffalo) and Assemblyman Carl Heastie (D-Bronx) today introduced legislation to expand influenza vaccination programs by providing insurance coverage for [influenza vaccine](#) and its administration at all authorized locations. The bills are S.1709 and the same as bill A.1090. You can view the legislation by [clicking here](#).

“This legislation will provide an opportunity to make vaccinations easily available in

locations such as schools and school-based health centers, which makes for a safer and healthier school environment. Children who are vaccinated are much less likely to contract influenza and miss school days,” said Senator Mark Grisanti.

Increasing the vaccination rates is critical to protecting public health and preventing the spread of the virus to vulnerable individuals in the community such as children and young adults who are three to four times more likely to be infected with influenza

“Insurance coverage for off-site [influenza vaccination](#) will help to protect high-risk New Yorkers such as children and the elderly from a potentially deadly virus during what is expected to be the worst flu season in a decade,” stated Assemblyman Carl Heastie.

According to the Department of Health, despite a mild flu season last year there were still 1,167 flu-related hospitalizations and one pediatric death. Over the last four years, there have been a total of 34 pediatric flu deaths in New York State and an average of more than 4,400 flu-related hospitalizations a year. This year, the Department reports that flu-related illness is increasing in more than half the regions of the State.

The Department of Health recommends that everyone six months of age or older receive a flu vaccination.
