The Rowley Center for Science and Engineering on the SUNY Orange campus in Middletown was officially dedicated on September 4, 2014. This stunning new addition to the college will offer the STEM curriculum of science, technology, engineering and math. With 107,000 square feet of classrooms, labs, student gathering spaces, and conference rooms, this Center will allow SUNY Orange to offer more competitive career opportunities for the county's young adults. It was fitting to name the center after the Rowley Family, who keep giving back not only to SUNY Orange, but to the community as well. Here is the Senator with I joined a terrific group of speakers who were all enthusiastic for the new opportunities our students will have pursuing a study in one of the STEM subjects.

The Senator with Rich and Marianne Rowley, and their daughter Elizabeth.
