

NEW YORK STATE SENATOR

Kemp Hannon

Water Quality Report

SENATOR HANNON January 3, 2017

| ISSUE: **WATER QUALITY**

| COMMITTEE: **HEALTH**

Water Quality and Contamination

A blue-tinted photograph of a single water drop falling into a pool of water, creating concentric ripples. The drop is captured mid-fall, just above the surface, with a smaller, more spherical drop above it. The background is a soft, light blue gradient.

In response to a burgeoning water quality crisis across New York State, the Senate and Assembly Health and Environmental Conservation Committees convened public hearings during the fall of 2016. The goal of these hearings was to provide an opportunity for legislators and the public to hear from state officials, experts, residents and others to gain an understanding of the problems as well as oversight responsibilities at the local, state and federal level with respect to water quality and contamination. These hearings provided a

foundation upon which to begin building a framework for legislation and policies to ensure more appropriate responses to current and future water contamination occurrences.
