Sen. Griffo joins with Republican colleagues to unveil comprehensive package of initiatives to help state's farmers, agriculture industry

ALBANY – State Sen. Joseph Griffo, R-Rome, joined his Republican colleague this week in unveiling a comprehensive package of initiatives to support New York’s family farmers and agriculture industry.

The “Growing Strong” plan will help strengthen family farms and create new jobs in the agriculture industry by expanding markets, reducing production costs, and investing in the state’s leading industry.

“From grape vineyards to dairy farms to apple orchards, New York State is home to generations of farmers and agriculture-related businesses that have helped our state to prosper,” Sen. Griffo said. “Without their hard work and perseverance, our state wouldn’t be the agricultural engine that it is today. My Senate colleagues and I have made it a priority to make sure that farmers get the resources and support that they need to ensure that they continue to thrive for many more generations to come. This plan will help us to do that.”

This year, the Senate Majority Conference will champion full restoration of the nearly \$13 million in cuts proposed in the Executive Budget. As a major employer and vital engine of rural economies, agriculture deserves a guaranteed seat at the state’s economic development table, and the Senate will push to ensure that agriculture gets its share of economic development funding in the new State Budget.

Since 2011, Republican Senate Majority-led efforts have provided more than \$50 million in restored executive budget cuts, increased funding, as well as spearheaded initiatives that are helping farmers achieve new heights in production and efficiency.

In addition to the restoration of the Governor’s budget cuts, the “Growing Strong” plan includes initiatives that will strengthen and preserve agriculture as a chief economic driver in the state. The initiatives include:

- Examine burdensome regulations: Direct state regulators to study existing state regulations that are harmful to farming, unnecessarily increase costs, and prevent farm success.

- Create a one-stop hotline for farmers seeking information on available state funding and resources to grow their businesses.

- Repeal the Highway Use Tax for farm-registered trucks, and exempt farmers from any proposal to add new “tolling” to enter New York City, as a way to bring more New York-grown products into the nation’s largest consumer market. New York is one of just four states that still imposes such a tax.

- Help farmers invest in facilities and buy equipment: Provide a tax credit for dairy farmers to encourage investment in facilities and equipment that will allow them to take advantage of a growing demand for “value-added” dairy products, like flavored drinks, yogurts, and other products that can satisfy existing, wide demand, such as in growing ethnic minority communities within the state.

- Modernize regulations for home processors: Allow home processors to use direct and indirect internet sales; home-based in-person sales; home-based delivery services; and community-supported agriculture subscriptions. Amending the law will reduce artificial barriers to business growth, expand potential markets, and help these entrepreneurs compete and grow their businesses. The legislation also calls on the Department of Agriculture and Markets to review onerous regulations that limit the types of products home processors can make and sell. Reforming Albany's regulations can help unleash the creativity and entrepreneurial spirit of New Yorkers to potentially create thousands of new small businesses.

- Make it easier to cross-promote products: Expand the privileges of farm breweries, cideries, wineries and distilleries to cross-promote each other’s products and to share a more similar set of privileges under the law. The bill will help the state’s regional and craft alcoholic beverage producers to cross-promote and collaborate in new ways that were previously only available to out-of-state competitors.

- Help farmers by giving them access to IDAs : Authorize industrial development agencies (IDAs) to provide technical and financial assistance to agricultural producers that grow, harvest, or produce agricultural products in this state. Expanding the authorization of already existing IDAs –

which, under current law can only issue loans and provide technical support to manufacturers, processors, and warehouse users of agricultural products – helps these agencies promote job growth in industries that rural areas of the state already have specialized in, such as fruit cultivation, raising of beef and other animals, and other agricultural pursuits. (passed the Senate on 2/27/18).

- Ease restrictions on utility vehicles: Allow the registration of all-terrain vehicles with a weight of no more than 1,500 pounds, operated upon public highways connecting portions of a farm or farms, fields, and agriculture buildings, and up to one-half mile from the vehicle owner's farm. Under current law, the increasingly popular utility vehicles cannot be registered for operation on highways in the state. Because of their relatively smaller size, these vehicles have proved useful and cost-effective in helping farmers perform daily tasks, including moving animals, feed, and equipment between fields and in making it possible to access areas of their farms where more traditional tractors and heavy equipment cannot go.

- Provide a tax credit for the purchase of New York-grown crops: Create a tax credit for companies that purchase New York-grown crops and use such crops in their value-added products; such credit increases with increased net sales. This bill is mutually beneficial for the state's farmers and craft beer producers that will be incentivized to buy in-state crops. Craft beer producers will keep industry dollars in the state economy while encouraging further growth of these high-demand crops. Eligible crops include various fruits, vegetables, and field crops including, among others, wheat, barley, and hops.

- Boost maple sap production: Create a system for permitting access to certain state lands for the purpose of collecting sap from maple trees and a tax credit for the purchase of qualified equipment used for the production of maple syrup. Allowing New Yorkers to tap some trees on state owned land will utilize an important untapped resource while creating new jobs and generating new state revenues. The tax credit for equipment will make it easier for farmers and others to enter the business or modernize their operations to more fully take advantage of this unique resource.

- Create a solar array pollinator benefit program: Create a voluntary standard for solar site owners who wish to publically claim that their site is beneficial to pollinators, including minimum standards

for biodiversity and land management practices. In 2016, it was estimated that New York State had lost fifty percent of its managed pollinator colonies and 70 percent of its commercial migratory bees. Wild pollinators have also seen their numbers suffer, with the Department of Environmental Conservation listing seven species of bees and 27 species of butterfly or moths as being Species of Greatest Conservation Need.

- Create a “Lifeline Dairy Energy Assistance Program” for dairy farmers struggling with a prolonged slump in milk prices, directing \$10 million in existing NYSERDA funds to install high efficiency lighting, pumping and cooling equipment, and to promote investment in energy-producing biomass generators and digesters. In addition to lowering farmers’ costs and improving efficiency, these investments will help the state towards its goal of increased reliance on renewable energy.
- Provide a new tax credit for craft brewers to encourage them to share their spent grains with dairy farmers to be used as cost-effective and nutritious feed.
- Expand agricultural P-Tech education programs that help prepare students for increasing technology demands of farming careers, restore funding for Beginning Farmer Grants that was cut from the Executive Budget, and increase support to establish new chapters of school-based FFA programs in response to growing interest in agriculture.
- Expand opportunities for success in agriculture by creating a specialized education certificate to acknowledge student achievement and training in the field.
- Increasing access to viable agricultural land: Direct the Department of Agriculture and Markets to develop an online list of state and privately owned lands that could be sold or leased to beginning farmers through a New York Farmland Licensing Program and directs the Agriculture Advisory Council to provide state agencies with advice on how to better address the needs of new farmers. Farming is a difficult business- several factors, such as the complex process of transferring ownership of farms and prohibitive capital costs, contribute to the aging of the farm population and present barriers to younger farmers gaining access to land.

· Encouraging more women to pursue farming careers: Authorized the Department of Agriculture and Markets to conduct a study to identify obstacles and impediments that prevent more women from pursuing agricultural careers. Attracting new farmers to pursue farming careers in New York is critical, and continuing to focus the state's efforts on encouraging growing sectors of the agricultural economy, like women-owned farm businesses, is a very important step in that direction. Since 2002, the number of women farmers in New York grew 14 percent, while the number of male-owned farms dropped by 8 percent.

· Protecting farmland near military bases: Establish an open space preservation project initiative to purchase air rights from farmers in areas where wind turbines could interfere with critical military training and operations, such as Fort Drum. By creating a targeted preservation program, the state can extend its limited resources to provide significant financial incentives to preserve farmland and open space and ensure continued agriculture production, while also averting development that threatens safe and effective military training and operations.

· Support efforts to recognize "New York" products, including creation of unique labels for products in every county of the state, complementing the Governor's proposal to highlight regional favorites.

· Upgrade and modernize State agency websites to allow consumers to more easily search for local farmers markets.

· Expand the Senior Farmers' Market Nutrition Program to make disabled veterans eligible for fresh produce benefits.

· Ensuring farmers' markets are equipped to accept EBT benefit cards: Provide state funding for the fees and costs associated with providing electronic benefit transfer technology at farmers markets. This initiative expands access to healthy foods by allowing access to necessary financial support to the several hundred unauthorized farmers markets across the state, thereby encouraging healthy eating, supporting local economies, and enabling all residents to purchase foods at farmers' markets.

These initiatives will be incorporated into budget negotiations and legislative actions the Senate will take throughout the 2018 session. The full plan can be found [here](#).
