

Earth Day

Reduce

Reducing the amount of waste you create, you help prevent pollution and protect the environment. You also limit the amount of waste going to land fill, preserve natural resources and save money.

Reuse

Reusing waste helps save landfill space by keeping useful materials out. By reusing recycled items to produce new products we reduce the impact we have on mother nature.

Recycle

Recycling helps to reduce the garbage in landfills that can take hundreds of years to break down. It also helps to preserve trees by reducing the need for new paper.
