## Recycling Poem

Recycling is the process of converting waste into new materials .

Helps the world and pollution .

There are the three R's of recycling

First R Reduce less

Second R Reuse it again

Third R buying recycled products is not a pain.

Why recycle helps the land pollution , water pollution , and air pollution  
look at how much pollution you can save!

The three arrows represent Reduce, Recycle , and Reuse.

Recycling materials can be reused into other materials.
