

What am I thankful for?

Our Lady of Good Counsel School

Grade 6

By Anthony Sclafani

What am I thankful for? That's a question I've asked myself a million times in my head. However, now I think I know what I truly am thankful for. I am thankful for modern technology, by that I mean that I'm thankful for all of the machinery and inventions that have both saved and improved lives.

Some exact things of technology that I am grateful for are Cars, X-ray machines and space satellites. These are just a few of the many pieces of technology I am grateful for. I'm grateful for those pieces of machinery because they provide transportation, maps, and excellent healthcare. X-rays are able to depict major health problems in you with a X-ray machine before you even have symptoms or signs of that exact health problem.

I am also grateful for cars and other kinds of transportation. I am thankful for cars and buses because these inventions can help you move from point A to point B in a small amount of time. I don't know what I would do without these forms of transportation. Not only that I'm grateful for that I'm also thankful for Space satellites. I am thankful for this because space satellites not only help us learn about earth but they also help us learn more about surrounding planets, not only that but space satellites are responsible for creating all of the maps you see online and what map you read while you're driving. They map out the earth from above.

That is my presentation on what I am thankful for. I hope you enjoyed reading my paragraph on what I am thankful for and why. There will be

many more modern technology inventions in the years to come which will continue to help society. I will be grateful for those new inventions too, when they are created.
