My name is Sykes. I'm in 6th grade and I go to Boquet Valley Central School. My hobbies are art and gaming. One of my qualities I'm thankful for is that I am artistic. Another quality I'm thankful for is that I am funny. The last quality I am thankful for is that I'm energetic.

The first quality that I am thankful for is being artistic. Being artistic is about having a creative imagination and not giving up. If you give up, then your art will never be finished. I show that I am artistic by drawing and usually not giving up. I keep trying until the art is done. I'm thankful for being artistic because I like that I am good at art and that people think that I am artistic. It makes me feel good. It will help me in the future by possibly allowing me to make money. Being able to think creatively allows you to have an extended view of stuff and have a better view of the world.

The next quality that I am thankful for is that I am funny. To be funny means to have a good sense of humor, to joke a lot, and to be able to make people laugh. I can show that I am funny by making jokes. It makes me thankful because I like it when people call me funny. It makes me feel good when I make someone laugh. It would help

me in the future because as a comedian, I could make money. It could also help me make friends.

I am thankful for being energetic. Energetic means to have a lot of energy and to be able to run around and still do other stuff. I think I am energetic because I can run around and be crazy. I like being able to run around and be crazy because it lets me run around, but still have energy left. It can help me in the future by allowing me to make money because you need to be energetic to do your job.

I am thankful for my qualities because those qualities make me special. The qualities I am most thankful for are being artistic, being funny, and being energetic. I show these qualities by just being me. They make me feel wonderful. I can get better at these by never giving up, having perseverance, practicing, and exercising.
