

HOW TO HELP NATURE

PLANTING A TREE HELP NATURE.

Planting a tree helps nature
because the oxygen that
we breathe comes from the
leaves of trees. Trees also
help to clean the air and
prevent soil erosion.

IT IS IMPORTANT TO TAKE CARE OF WATER.

Water is a precious resource
and we should take care of it.
We can save water by taking
shorter showers, turning off
the tap when brushing our
teeth, and fixing leaks.
We can also conserve water
by using water-saving devices
like low-flow toilets and
showerheads.

Waste Doesn't Help the Environment

Recycle and reuse items to help the environment and save money.

- Recycle paper
- Recycle plastic
- Recycle glass
- Recycle metal
- Reuse items when possible
- Buy items with recycled content
- Buy items with energy-efficient labels
- Buy items with water-efficient labels

Recycling helps the environment
because it saves resources and
reduces pollution. Recycling
also saves money because
recycled materials are often
cheaper than new materials.

HOW TO HELP THE WORLD.

There are many ways to help the world.
We can reduce our carbon footprint
by driving less, using energy-efficient
light bulbs, and recycling. We can
also help the world by donating to
charity, volunteering, and supporting
sustainable products.
